

90% of the users have significant improvement in the FibroScan values

It takes effect after the users took fucoxanthin for two months, as shown by the accurate testing using a newer version of FibroScan. There is a significant improvement in the Fatty Liver Index. One will have better effect if he/she continues to take it for half a year.

Interpretation of Liver Stiffness in kPa					
		Probable Minimal Fibrosis	Borderline Fibrosis	Probable Advanced Fibrosis	Probable Cirrhosis
Hepatitis B	Normal ALT	≤ 6.0	$> 6.0 - 9.0$	$> 9.0 - 12.0$	> 12.0
	Elevated ALT	≤ 7.5	$> 7.5 - 12.0$	$> 12.0 - 13.4$	> 13.4
Hepatitis C		≤ 7.0	$> 7.0 - 9.5$	$> 9.5 - 12.5$	> 12.5
NAFLD		≤ 5.8	$> 5.8 - 9.6$	$> 9.6 - 11.5$	> 11.5
Alcoholic Liver Disease		< 5.9	> 7.8	> 11	> 19.5
Liver Stiffness for healthy individual			2.3kPa - 5.9kPa		

Interpretation of Controlled Attenuation Parameter (CAP) in dB/m6				
Liver steatosis	Minimal (5-10%)	Mild (11-33%)	Moderate (34-66%)	Severe ($\geq 67\%$)
CAP	< 248	248 - 267	268 - 279	≥ 280

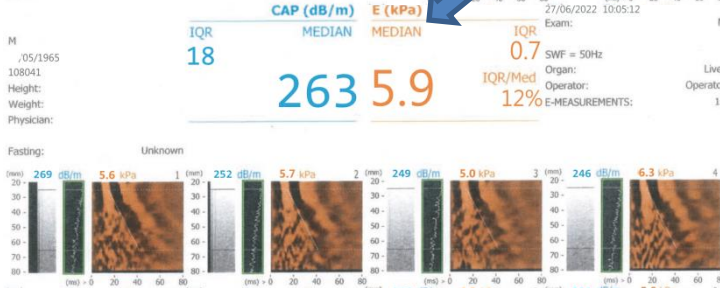

FibroScan®

Taken for half a year

Mr. Lau said, "It is refreshing. I become energetic."

FibroScan®

FibroScan®

Taken for 4 months

Miss Law said, "My skin has improved. I can easily fall asleep."

FibroScan®

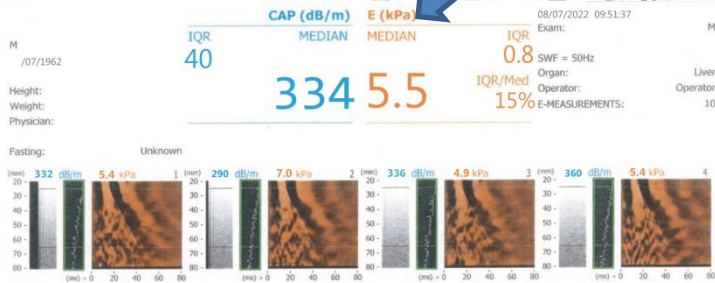

FibroScan®

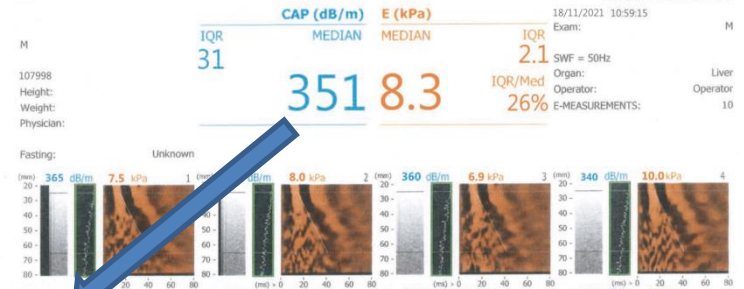

Taken for 2 months

Mr. Wong said, "I am more energetic!"

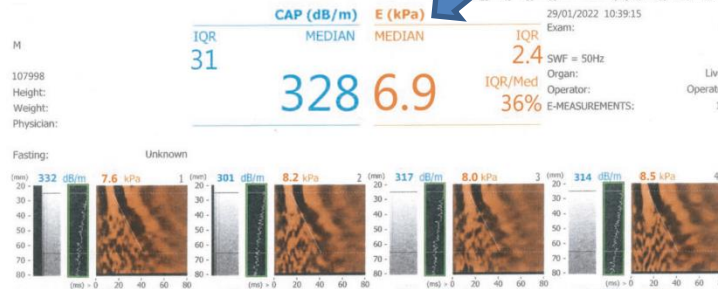

FibroScan®

FibroScan®

FibroScan®

Taken for 2 months

Mr. Lo said, "I sleep better!"
